AI Summary | Description

The Navy Wireless and Cellular Services and Devices 2011-2012 Master IDIQ contract provides nationwide wireless services and devices to support mission-critical communications for the Department of the Navy and Marine Corps. This vehicle was established by the Fleet and Industrial Supply Center, San Diego in January 2011 with a shared ceiling of $96,000,000 and a final ordering date of July 31, 2012. The contract encompasses cellular phone service, wireless voice and data plans, pooled wireless communications accounts, overage services, and associated wireless devices and equipment. Task orders issued under this vehicle address wireless connectivity requirements across multiple Navy and Marine Corps commands, from individual service lines to large pooled communication plans supporting naval platforms and shore installations.

The task orders under this Master IDIQ demonstrate a wide range of values and durations, with individual delivery orders ranging from under $200 to over $600,000, and performance periods typically spanning 6 to 18 months. Major prime contractors winning task orders include Verizon Wireless (Cellco Partnership), AT&T Mobility (New Cingular Wireless Services), and Sprint Communications Company L.P., reflecting the primary commercial wireless carriers supporting federal requirements. Task orders were issued throughout 2012 and into 2015, with the majority of early orders executing from mid-2012 through 2013. Funding agencies include Naval Sea Systems Command, Naval Air Systems Command, Naval Supply Systems Command, and various Marine Corps units, with performance locations spanning multiple geographic regions including New Jersey, California, and other nationwide locations. No small business set-asides were utilized across the task orders examined, indicating that requirements were competed among multiple unrestricted prime contractors.
